lineshaft borehole pumps

Franklin Electric

Positive displacement lineshaft borehole pumps

The Mono BP range of pumps has served South African farmers for decades. Robust and durable in their construction, these pumps are able to operate under the toughest working conditions.

Franklin Electric's Mono BP range consists of 32 models capable of pumping up to 100 000 l/h and heads up to 300m.

The Monostroom and Monomeester discharge heads can be driven by petrol or diesel engines, solar energy, tractor power, wind or electricity. The durable BP range incorporates Mono's proven rubber stator and flexible shaft drive in its design.

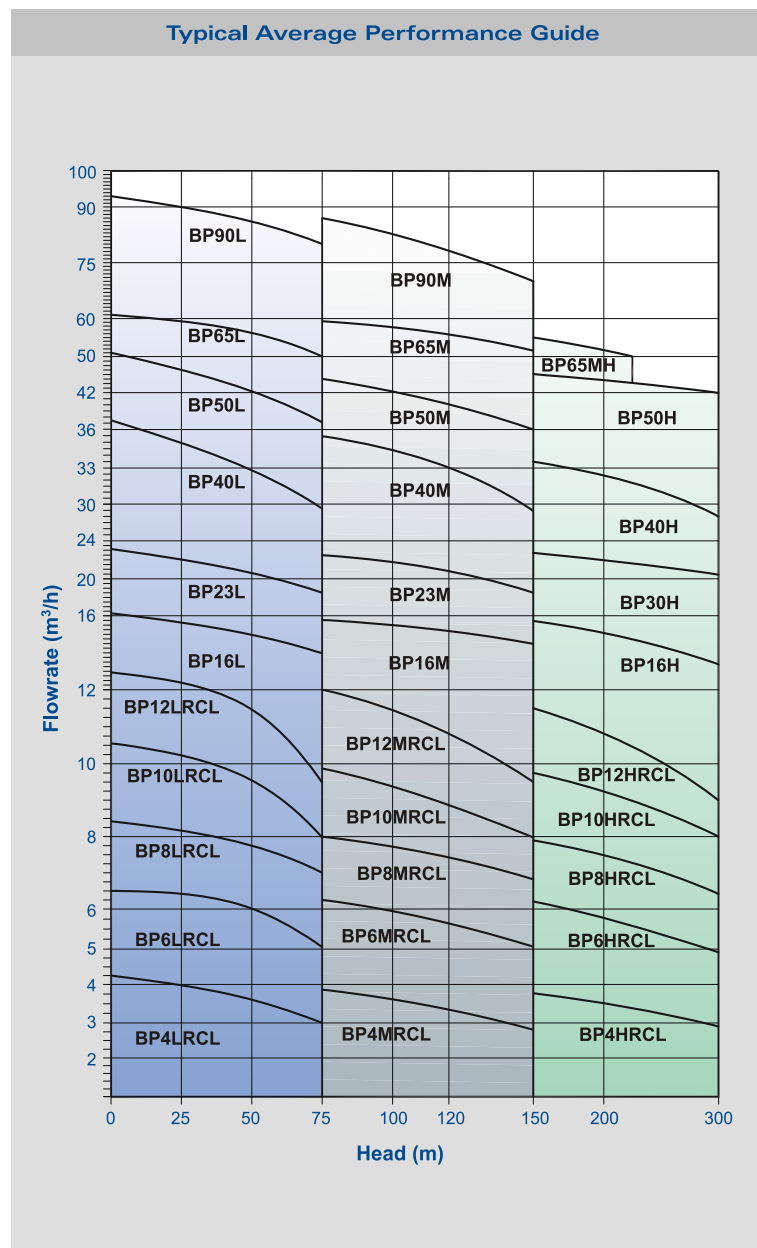

The positive displacement characteristics of the Mono's rotor stator design ensures that the head developed is independent of, and the capacity proportional to, the pump speed.

Features

- Mono progressing cavity pumping technology proven for over 60 years
- Long-life, fully-machined flexible shafts with rolled threads eliminate the need for vulnerable universal couplings
- Monostroom and Monomeester discharge heads use sealed pre-greased bearings for optimum, maintenance-free operation
- Precision-machined and threaded column pipes incorporating truncated threads for maximum strength
- Twin datum bearings fitted to all larger pump elements to eliminate drive shaft stresses
