

M Range

Versatile and reliable.
Widely used in industry, from mining
to water treatment and chemicals.

Franklin Electric

Pumping System Solutions

The versatile and reliable Mono M range of positive displacement industrial pumps is widely used for industrial applications, processing and agriculture. Mono M range pumps are ideal for wherever viscous, abrasive fluids and other demanding pumping applications are required.

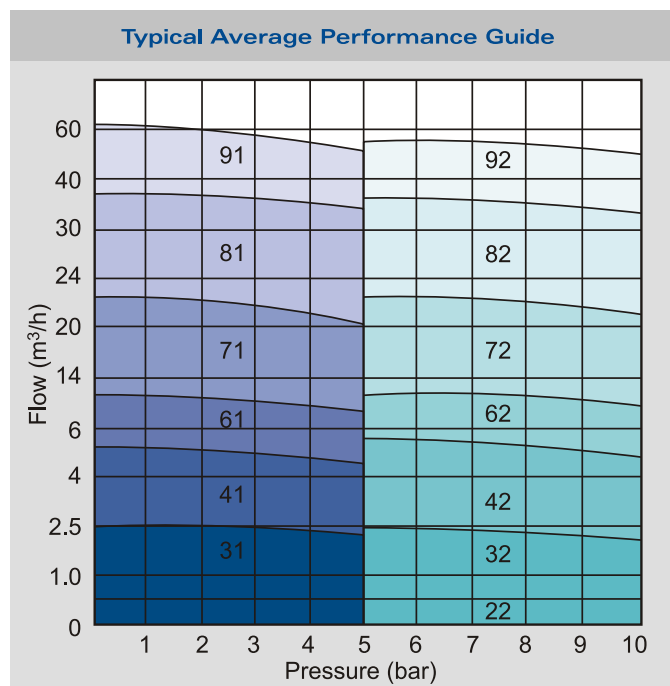

The M range pumps incorporate simple, economically maintained universal couplings.

The Mono M range helical rotor or progressing cavity pump is manufactured in cast iron or stainless steel and has unsurpassed versatility in handling a wide variety of liquids.

- Positive displacement, reversible, self-priming actions with high suction capability
- Uniform non-pulsating flow
- Abrasion resistance
- Ability to transfer, without damage, products containing hard or soft solids
- Ability to transfer highly viscous products
- Low-shear characteristics
- Capacity proportional to speed

Performance Guide

The table relates to pumps handling water at 20°C and should be used only as a guide. Since optimum operating speeds for a particular duty are selected by taking into account all relevant parameters such as viscosity, abrasion, solids, NPSH, etc., it is advisable to consult Franklin Electric for the ideal selection. Direct on-line starting is recommended.
